Project name: Electronic Commerce web.

- Project description: An E-commerce platform that allows users to purchase, sell products. You can also link with logistic third parties to enable shipping.
- Project goals: After the COVID-19 pandemic, the need for online shopping has increased dramatically. Realizing the opportunity, our team decided to create this project to help buyers and sellers easily find each other.

Users on the website:

- Buyers: Purchase products.
- Sellers: Sell products, Contact shippers.
- Logistic 3rd parties (shippers): Provide shipping.
- Admins: manage as well as provide support for the other 3 types.

Environments: Web that supports PC, phones and tablets.

Features:

- Feature 1: Sign In/ Log In:
 - Users can register their account type to get access to features that correspond to their needs.
 - Although Registering an account is encouraged, users are not required to have an account to use the website, they only need an account to make a purchase.
- Feature 2: Sell/ Purchase Products:
 - Add/ Edit/ Delete products in store (buyers)
 - View product description (sellers)
 - View orders (buyers)
 - Messaging (All)
- Feature 3: Find orders and receive orders:
 - Allow users to find orders that haven't had delivery
 - Shippers can update the order's status.
- Feature 4: Support users to find requests and the admin can see requests and respond to them.
- Feature 5: Product:
 - Users can see product details.
 - Users can review the products.
- Feature 6: Account:
 - Manage products for sellers.
 - Manage orders for customers.
 - Manage delivery state for shippers.

Pages may have:

- Users: Sign in/ Sign up, Index page, Product detail, Order, Cart, Account, Search (for Shipper, for User).
- Admin: See order, see help requests, change adversity.
